PROJECT DESCRIPTION:

The Project consisted of the design and construction of a new two-story Classroom Building for the School of Business and Public Policy. The fully cast-in-place concrete building was designed to be compatible with the existing campus architecture, primarily constructed in the International Style.

The Project Scope included: First floor: Two (2) auditorium-style tiered classrooms (35 students each) designed to be opened into one space for larger classes and video teleconferencing, a third straight-tiered classroom for 35 students, and Restrooms. Second Floor: Three (3) classrooms (34 students each), two of which can be combined; two (2) Conference/Breakout Rooms, and Restrooms.

The Project's site and orientation was chosen to enhance the Campus' distinctive architectural character and pedestrian circulation. The building was designed for durability in a marine environment with upgraded building materials and special attention to exposed metal finishes. The Project also included new site utilities, native/drought-resistant landscaping, roadway improvements, and pedestrian site circulation.

SUSTAINABILITY:

LEED™ Gold (Pending)
49.68 kW Photovoltaic Power System
